Project Name	Employee Raise Issue – Record Producer & Service Portal Integration Guide
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:

Project Visual Board: Employee Raise Issue System (ServiceNow)

Applying the 5-step Miro Customer Problem Statement canvas to our primary persona (Enterprise Employee raising a workplace issue in ServiceNow):

Defined Problem Statements (PS-1, PS-2, PS-3):

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 *(Employee / Requester Persona)*	An enterprise employee (`sys_user`) facing a workplace issue such as a VPN failure, laptop fault, server outage, password lockout, or payroll query.	Quickly log my issue through a dedicated self-service portal (`/employee_request`), select the right category, and track my ticket status (`New`, `In progress`, `Resolved`, `Closed`).	I have to send unstructured emails or informal messages that provide no ticket reference number (`Number`) and no visibility into resolution progress.	The organization lacks a centralized ServiceNow Service Portal (`Requesting portal`) connected to a guided Record Producer (`Raise Employee Issue`) and custom table (`Employee raises issue`).	Frustrated, delayed in my daily work, and uncertain whether support has seen my request.
PS-2 *(IT Support Engineer Persona)*	An IT support engineer in an `Assignment Group` (`sys_user_group`) responsible for resolving employee `Network`, `Hardware`, `Software`, and `Access` tickets.	Receive complete, standardized issue records with accurate `Category` → `Subcategory` classifications (VPN, `Laptop`, `Server`, `Forgot password`) and clear `Priority` levels.	Incoming requests often omit problem summaries (`Short description`) or pair mismatched categories and subcategories, requiring manual follow-up emails before triage.	Email channels cannot enforce ServiceNow UI Policies (mandatory `Short description` when `State is New`; read-only `Number`) or Dictionary Choice Dependencies.	Overwhelmed by manual ticket cleanup and slowed down by avoidable back-and-forth clarification.
PS-3 *(HR & Support Operations Manager)*	An HR and workplace support operations lead overseeing enterprise service quality, prioritization, and issue resolution across departments.	Standardize intake across a single governed application scope (`Employee Center`) and ensure every employee issue is routed to the right `Assignment Group`.	Issues reported via scattered emails and chat threads have inconsistent prioritization (`Critical`, `High`, `Medium`, `Low`) and no centralized audit trail.	Workplace issue reporting is not consolidated into an auto-numbered ServiceNow table with a dual-widget Service Portal landing page (`Commercial widget` & `Link redirect`).	Concerned about SLA delays, unmonitored requests, and inconsistent employee support experiences.
