Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	23 October 2026
Team ID	Individual (Abdul Khadarvali)
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration Guide
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution across all 8 project phases (SkillWallet Workspace).

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Creating a Custom Application *(Phase 1 — 30m)*	• Navigate to `All menus → App Engine → ServiceNow Studio`. • Create a new Scoped Application named `Employee Center` (`Scope: Scoped`). • Reload the main ServiceNow home window to activate `Employee Center` as the current application.
FR-2	Creating a Custom Table & Fields *(Phase 2 — 1h 0m)*	• Create custom table labeled `Employee raises issue` under `System Definition → Tables` with `Auto number` enabled under Controls. • Configure 8 fields via Form Design: `Number` (Auto-Number), `Requester` (Reference: `sys_user`), `Category` (`Network`, `Hardware`, `Software`, `Access`), `Subcategory` (VPN, `Laptop`, `Server`, `Forgot password`), `Short description` (String), `State` (`New`, `In progress`, `Resolved`, `Closed`), `Priority` (`Critical`, `High`, `Medium`, `Low`), and `Assignment Group` (Reference: `sys_user_group`).
FR-3	Creating UI Policies & Dependency *(Phase 3 — 1h 20m)*	• Story 1 (UI Policy 1): Condition `State is New` → set `Short description` to `Mandatory = true`. • Story 2 (UI Policy 2): No filter condition → set `Number` field to `Read only = true`. • Story 3 (Dictionary Dependency): Set `Subcategory` dependent on `Category` in Advanced view (`Network → VPN`, `Hardware → Laptop`, `Software → Server`, `Access → Forgot password`).
FR-4	Creating a Record Producer *(Phase 4 — 40m)*	• Create Record Producer `Raise Employee Issue` targeting table `Employee Raise issue` under Catalog `Service Catalog` and Category `Service`. • Configure 5 mapped variables: `What is the Requester name` (Order 100), `Which Category` (Order 200), `What is Subcategory` (Order 300), `Which State is this issue` (Order 400), and `Short description` (Order 500).
FR-5	Creating a New Service Portal *(Phase 5 — 30m)*	• Story 1: Configure Service Portal `Requesting portal` (URL `suffix: employee_request`, `Homepage: ec_standard_home`, `KB home page: esc_knowledge_home`, `Login page: login`, `Main menu: Employee Center Menu`, `404 page: 404`, `Theme: Employee Center Coral Theme`). • Story 2: Create portal page `Employee Center Portal Page` (`ID: employee_center_portal_page`).

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-6	Creating Widgets & Portal Validation *(Phases 6, 7 & 8 — 2h 10m)*	• Story 1: Create Left Widget (`Commercial widget`) with HTML service bullet list and 135-deg linear-gradient CSS. • Story 2 & 3: Create Right Widget (`Link redirect`) with AngularJS controller redirecting to `sp?id=sc_cat_item&sys_id=<RECORD_PRODUCER_SYS_ID>` and place both widgets inside a `6*6` grid container in Service Portal Designer. • Phase 7 & 8: Validate end-to-end issue submission at `/employee_request`.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description & ServiceNow Implementation Standard
NFR-1	**Usability**	Provides a modern, intuitive self-service portal (`/employee_request`) styled with `Employee Center Coral Theme`, a balanced `6*6` two-widget layout, and a guided 5-question Record Producer form (`Orders 100–500`) that shields employees from complex backend table forms.
NFR-2	**Security**	Encapsulates all tables, policies, catalog items, and widgets inside the `Employee Center` Scoped Application, enforces authenticated portal login (`login` page), and locks the system-generated `Number` field as strictly read-only via UI Policy.
NFR-3	**Reliability & Data Integrity**	Guarantees complete, accurate data capture on every issue record by enforcing a mandatory `Short description` when `State is New` and restricting `Subcategory` choices to valid parent `Category` selections via Dictionary Dependency.
NFR-4	**Performance**	Uses lightweight HTML5/CSS3 widgets and client-side AngularJS `$location.url()` routing to load the Record Producer form and insert backend records in under 2 seconds without heavy synchronous server scripts.
NFR-5	**Availability**	Runs on the cloud-hosted ServiceNow platform with 24/7 browser accessibility at `/employee_request`, supported by pre-configured `login`, knowledge base (`esc_knowledge_home`), and `404` fallback pages.
NFR-6	**Scalability & Maintainability**	Links records to standard platform tables (`sys_user` for `Requester` and `sys_user_group` for `Assignment Group`) and uses dictionary-driven choice lists so new issue categories, subcategories, or support groups can be added without modifying widget code.
