Project Design Phase
Proposed Solution Template

Date	27 October 2026
Team ID	Individual (Abdul Khadarvali)
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration Guide
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In a large enterprise organization, employees frequently encounter workplace-related issues such as payroll discrepancies, access lockouts, hardware faults, or HR policy clarifications. Raising these issues through unstructured emails or informal chat channels leads to: • **Lack of standardized data capture:** Missing category, subcategory, or issue summary. • **Delayed issue resolution:** Support teams must send follow-up emails before troubleshooting. • **Zero visibility into issue status:** Employees receive no reference `Number` or live `State` tracking. • **High manual effort & inconsistent assignment:** HR and IT staff manually log requests without standardized `Priority` or `Assignment Group` routing.
2.	Idea / Solution description	A modular **ServiceNow Scoped Application (`Employee Center`)** that integrates an auto-numbered custom table (`Employee raises issue`), declarative form rules, a Service Catalog **Record Producer** (`Raise Employee Issue`), and a custom **Service Portal** (`Requesting portal` at `/employee_request`): • **Portal & Dual Widgets:** Features the `Employee Center Coral Theme` and a `6*6` grid container hosting the left `Commercial widget` (HTML5/CSS3 linear-gradient banner) and right `Link redirect` widget. • **Record Producer Intake:** Clicking *"Raise Ticket ->"* invokes AngularJS `$location.url('sp?id=sc_cat_item&sys_id=' + RECORD_PRODUCER_SYS_ID)` to load 5 field-mapped variables (`Requester`, `Category`, `Subcategory`, `State`, `Short description` at Orders 100–500). • **Backend Governance:** Populates the 8-field `Employee raises issue` table while enforcing UI Policies and `Category → Subcategory` dependencies.
3.	Novelty / Uniqueness	• **Decoupled Catalog Intake Architecture:** Uses a Record Producer (`Raise Employee Issue`) rather than exposing raw backend table forms, providing a clean questionnaire while mapping directly to custom table columns. • **Declarative Zero-Script Data Integrity:** Enforces mandatory `Short description` (when `State is New`), read-only `Number` protection, and 4-pair dependent choice filtering (`Network → VPN`, `Hardware → Laptop`, `Software → Server`, `Access → Forgot password`) using native UI Policies and Dictionary Overrides. • **Single-Click SPA Portal Redirection:** Combines custom gradient CSS styling with client-side AngularJS `$location.url()` routing inside a `6*6` responsive portal layout.

S.No.	Parameter	Description
4.	Social Impact / Customer Satisfaction	• **Transparent Employee Experience:** Replaces email uncertainty with an immediate, auto-generated ticket `Number` and clear lifecycle states (`New`, `In progress`, `Resolved`, `Closed`). • **Faster Support Resolution:** Eliminates repetitive clarification emails for IT and HR teams (`sys_user_group`) by guaranteeing complete, validated issue data at submission. • **Reduced Workplace Downtime:** Helps employees resolve critical VPN, laptop, server, and password issues faster.
5.	Business Model (Revenue Model)	• **Enterprise Operational ROI Model:** Built natively on the organization's existing ServiceNow App Engine / ITSM platform footprint, reducing helpdesk triage labor costs and Mean Time to Resolution (MTTR) with zero third-party licensing fees. • **Portable Scoped Application Asset:** Packaged inside the `Employee Center` Scoped Application, enabling rapid deployment across enterprise subsidiaries or client instances via Update Set XML.
6.	Scalability of the Solution	• **Data-Driven Category Expansion:** New categories (e.g., `Payroll`, `Facilities`) and dependent subcategories can be added in the Dictionary Choice table without changing widget code. • **Enterprise Directory Linking:** Reference fields link directly to `sys_user` and `sys_user_group`, scaling to thousands of users and support teams. • **Workflow Extensibility:** Ready for future integration with Flow Designer notifications, Priority SLA timers, and Virtual Agent topics.
