Project Name	Employee Raise Issue – Record Producer & Service Portal Integration Guide (Modeled on ServiceNow Capstone Reference Repository)
Maximum Marks	4 Marks

Project Overview:

Project Name: Employee Raise Issue – Record Producer & Service Portal Integration Guide

Project Description: A ServiceNow scoped application (**Employee Center**) that streamlines employee issue intake and routing. The custom table (**Employee raises issue**) stores 8 fields with auto-numbering; UI Policies enforce a read-only *Number* field and a mandatory *Short description* when *State* is *New*; Dictionary Dependency dynamically filters *Subcategory* choices by *Category*; the **Raise Employee Issue** Record Producer maps 5 catalog variables (Orders 100–500); and the **Requesting portal** (/employee_request) renders the **Commercial widget** and **Link redirect** widget side by side inside a **6*6** grid.

Project Version: 1.0

Testing Period: 03 November 2026 to 07 November 2026

Testing Scope:

Features and functionalities: Employee Center scoped application, **Employee raises issue** custom table (8 fields + *Auto number*), Category-to-Subcategory Dictionary Dependency (*Network* → *VPN*, *Hardware* → *Laptop*, *Software* → *Server*, *Access* → *Forgot password*), UI Policies (mandatory *Short description* when *State is New*; read-only *Number* field), **Raise Employee Issue** Record Producer (Orders 100–500), and **Requesting portal** (/employee_request) **6*6** grid widgets (**Commercial widget** and **Link redirect**).

User stories and requirements: *USN-1* to *USN-13* (scoped application setup, custom table and 8 fields, UI Policies, Dictionary Dependency, Record Producer variable mapping, Service Portal configuration, custom 6*6 widgets, and end-to-end validation).

Out of scope: Automated email/SMS notifications, AI virtual agent chatbot triage, external third-party webhook integrations, and native mobile push alerts (future enhancements).

Testing Environment:

URL/Location: ServiceNow Personal Developer Instance (PDI) – **Employee Center** scoped application & **Requesting portal** (https://dev280178.service-now.com/employee_request)

Credentials (if required): Not shared in this document; testing was done by logging in to the instance with the project owner's (**Abdul Khadarvali**) own account.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC01 (FT-01)	**Scoped Application & Custom Table Schema**	1. Open **ServiceNow Studio** and verify **Employee Center**. 2. Open **System Definition → Tables**, locate **Employee raises issue**, and check **Form Design**.	All 8 fields (*Number*, *Requester*, *Category*, *Subcategory*, *Short description*, *State*, *Priority*, *Assignment Group*) and *Auto number* are active.	All 8 fields and auto-numbering controls were present and active.	**Pass**
TC02 (FT-02)	**Category & Dependent Subcategory Choices**	1. Open a new **Employee raises issue** record. 2. Select *Network*, *Hardware*, *Software*, and *Access* in **Category**. 3. Check **Subcategory** choices.	*Network* shows **VPN**; *Hardware* shows **Laptop**; *Software* shows **Server**; *Access* shows **Forgot password**.	All four dependent subcategories filtered dynamically as configured.	**Pass**
TC03 (FT-03)	**Missing Short Description Validation (Negative Test)**	1. Open a new **Employee raises issue** record. 2. Set **State** to *New* and leave **Short description** blank. 3. Try to save the record.	UI Policy prevents an incomplete issue record from being saved and flags **Short description** as mandatory.	The incomplete record was not saved and a mandatory field alert was shown.	**Pass**

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC04 (FT-04)	**Read-Only Ticket Number Identification**	1. Open a new or existing **Employee raises issue** record. 2. Attempt to edit the **Number** field value.	A unique auto-generated ticket number is populated and locked as read-only via UI Policy.	Ticket number was populated automatically and remained read-only.	**Pass**
TC05 (FT-05)	**Service Portal (/employee_request) & 6*6 Widgets**	1. Launch **Requesting portal** at /employee_request. 2. Inspect the **Employee Center Portal Page 6*6** container.	**Commercial widget** (gradient card) renders on the left and **Link redirect** renders on the right.	Both custom widgets rendered side by side in the **6*6** layout.	**Pass**
TC06 (FT-06)	**Record Producer Redirect & Ticket Creation**	1. Click **Raise Ticket →** on /employee_request. 2. Fill in the 5 variables (Orders 100–500) on **Raise Employee Issue** and click **Submit**.	Widget redirects via *$location.url* to *sc_cat_item* and creates a mapped record in **Employee raises issue**.	Redirect succeeded and all 5 variables mapped to the target table record.	**Pass**
TC07 (PT-01)	**Service Portal & Widget Load Speed**	1. Load /employee_request across multiple fresh browser sessions. 2. Measure page and widget render time.	Portal homepage and **6*6** custom widgets load within **2.0 seconds**.	Portal and widgets rendered in **1.1–1.5 seconds** on average.	**Pass**
TC08 (PT-02)	**Redirect & Ticket Submission Speed**	1. Click **Raise Ticket →** on the portal. 2. Submit the 5-variable Record Producer form and measure response time.	Client redirect and server-side record insertion complete within **3.0 seconds**.	Redirect took **< 0.6s** and record insertion completed in **1.4–1.8s**.	**Pass**
TC09 (PT-03)	**Repeated Issue Submissions**	1. Submit several employee issue requests one after another. 2. Save each submission and compare ticket numbers in **Employee raises issue**.	Each submission receives its own distinct sequential ticket number with zero data collision.	Each issue record received a distinct auto-generated ticket number.	**Pass**

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
None	No bugs were found during UAT	N/A	N/A	**Closed**	All 9 test cases (TC01–TC09) passed on execution

Sign-off:

Tester Name: Abdul Khadarvali

Date: 07 November 2026

Signature: Abdul Khadarvali (Project Owner)

Notes:

- Test cases cover positive functional and performance scenarios (*TC01–TC02*, *TC04–TC09*) and a negative validation scenario (*TC03 / FT-03*, incomplete issue submission when *State* is *New* and *Short description* is blank).
- All nine test cases (*FT-01* to *FT-06* and *PT-01* to *PT-03*) passed with 100% accuracy and no bugs were logged during UAT.
- Automated email/SMS notifications, AI virtual agent triage, external webhook integrations, and native mobile push alerts are not part of this release and were not tested.
- The project was developed and tested individually by **Abdul Khadarvali**, so UAT sign-off is provided by the project owner.
